

High Attenuation Frameless Enclosures

Select Fabricators' High Attenuation Frameless Enclosures guarantee -100 dB or more of isolation on average. Lightweight fabric enclosures are quick and easy to set up, break down, and store. Frameless test boxes are an ideal solution for shielding and isolating RF and EMI in your lab.

Frameless Enclosures are made with a double layer of Nova Select™. Nova™ is a tightly woven silver, copper, and nickel-plated high-tech material which offers the highest levels of attenuation. Frameless Enclosures are supported by flexible flat 2" foam microwave absorber which aids the enclosures in achieving over -100 dB of attenuation.

24" x 24" x 24" Frameless Enclosure

Options:

SFI's patented magnetic door closure system (**US Pat. No. 8,530,756 and US Pat. No. 9,029,714**) combined with filtered connectors and IO plates, shielded ventilation systems, and more, create shielding environments ideal for many applications including pre-compliance testing, signal isolation, secure communications, forensic, and security applications.

Select Fabricators can work with any custom specification to meet unique project requirements.
