

### Retractable telescoping sprinkler heads for anechoic chambers

Sprinkler Innovations Yo-Yo series of retractable telescoping sprinkler heads brings effective, time-saving fire control technology to the anechoic chamber. Factory Mutual approved, this innovative sprinkler automatically retracts after a system test or false activation and resets itself above the ceiling. This means you can test the entire sprinkler system without anyone entering the chamber. Start-to-finish trip test time: only 2 hours!

#### Minimize disruptions, maximize profits

By minimizing the kinds of incidents that interrupt continuous use, the unique Yo-Yo system enables you to maximize anechoic test schedules. Most important, **no water enters your anechoic chamber during sprinkler system testing or with a false activation.**

Once a trip test is run and the system is depressurized, each sprinkler head resets itself. **No need to remove items or anechoic materials from the chamber, resulting in a significant cost savings.**

### Our proprietary technology is your best choice for anechoic chambers

- Easily installed to replace your current system
- Designed and built to be virtually maintenance-free for 7 years
- Trip test time is only 2 hours
- Retracts and resets after testing
- Slam tested at 225 lbs
- Test without removing items or anechoic materials from chamber
- Water will not enter chamber unless triggered by heat
- Factory Mutual approved
