

The platform (base/foot) of the Monopod is made of wood.

The vertically pole is made of glass fibers and can be adjusted between 100cm minimal height to 1700cm maximum height.

The board on which the camera and the pan/tilt unit are mounted, can be removed easily by pulling the splint.

Minimal height 100 cm  
Maximal height 1700 cm

By default, the monopod comes with fell gliders.

Optional casters are available (only fit for even surfaces).

With the help of a quick release clamp mounted on the camera or the pan/tilt unit, the system is set up fast.

In addition, the monopod can be disassembled completely for storage and transportation.
